

Quarterly Enhancement Release Bulletin

Date 1/1/2015 - Release 1.8.47 to 1.8.53

In the last quarter of 2014, SRK has been enhanced a lot on chart functions. SRK provides illustrations of each chart type so that users can easily visualize the chart before actually creating it. (Release 1.8.53) To be more informative, values of entries being plotted can also be displayed on the chart. (Release 1.8.52) More than two y-axes representing different group of can now be plotted into one single chart so that trends can be compared much more easily. (Release 1.8.49) Bar charts and line charts can also be sorted separately from the sorting of the data table, hence the highest or the lowest values can be identified easily. (Release 1.8.48) A new chart type "Smooth Line chart" is introduced in addition to the 6 chart types SRK already supports. (Release 1.8.49) Besides bar charts and line charts, radar charts can now be plotted data with group-by option as well, allowing user to present data in finer granularity (Release 1.8.50) Chart graphs along the x-axis can now be grouped by color or by x-axis grid, which can be configured by users based on their needs. (Release 1.8.49)

User experience of rearranging Custom View data table columns has been improved and now supports drag-and-drop gesture. (Release 1.8.53) Column width adjustment experience is also optimized. (Release 1.8.51) View edit and create UI is made easier by allowing users to select source from data series directly, (Release 1.8.49) and select or de-select all output fields at once. (Release 1.8.51) Last but not least, line break is allowed for the field name while creating data series. Users would no longer need to manually remove line breaks from CSV files/spreadsheets before importing into SRK. (Release 1.8.50)

This concludes the year of 2014. DrivenBI has equipped SRK with many strong capabilities while persist in the mindset of enhancing user's experience at the same time, consistently offering SRK as a powerful self-service analysis platform to face the challenges for the year 2015.

Date 12/26/2014 Release 1.8.53

- Improved the column rearrangement by using a drag and drop method.
- Displayed illustrations next to the corresponding chart types under the chart option.

Date 12/12/2014 Release 1.8.52

- Chart now shows the number of entries plotted and the corresponding values

Date 11/26/2014 Release 1.8.51

- Custom View edit now allows selecting/deselecting all output fields at once.
- Optimized the column width adjustment experience. Expanding one column would not cause other columns to shrink.

Date 11/14/2014 Release 1.8.50

- Radar chart now supports the same "group by" function as line chart and bar chart.
- Compatible with line breaks on field names for importing data by SRK Express, Standard, and Advanced Importer in Windows, Mac OS, and Linux.

Date 10/31/2014 Release 1.8.49

- Custom View enhancements:
 - Users can now use Data Series as sources, as well as from other selected source directly from Custom View edit UI.
 - Subtotal row calculation is now in sync with the summary row.
 - Substantial improvements to Custom View edit UI. Selecting source made easier.
- Chart enhancements:
 - Now supporting smooth line chart.
 - Users are allowed to add more than two y-axes when using line/bar charts.
 - Chart graphs along the x-axis can now be grouped by color or the x-axis grid.

Date 10/17/2014 Release 1.8.48

- Matching fields in custom view now support configurable case sensitivity and also allow checking against "blank" value.
- Chart feature has the following enhancements:
 - Users can now apply sorting to values plotted on chart
 - Lengthy x-axis labels are now slanted to avoid overlapping and provide better readability.

Date 10/3/2014 Release 1.8.47

- The list of Pages in an Organization can now be easily accessed from the Organization Home page.
- Express Import has been enhanced to allow users to modify the type of each Data Series field prior to the import and create data series
- Organization administrators can now see more details of the usage of subscription on the Membership page.
